# TWIN HILLS

## Wind Farm

### PROJECT UPDATE

We are pleased to announce that good progress has been made in developing the Twin Hills Wind Farm over the past 12 months.

In November we received development approval from the Shire of Three Springs to install a new wind monitoring mast at the project site. This mast will allow for the collection of accurate wind data that will be used in the wind turbine selection process and economic modelling for the project.

Ecology consultants have conducted surveys over the project site to assess potential impacts to flora and fauna. Consultants have also been engaged to assess potential impacts relating to noise and visual amenity.

### UPCOMING WORKS

We plan to install a 120m wind monitoring mast at the project site in mid-January 2025. Anemometers and wind veins will be installed on the mast to measure the speed and direction of the wind. The mast will be fitted with aviation safety markings and lightning protection in accordance with relevant regulations. No impacts relating to noise, traffic, ecology, or bushfire risk are anticipated from the installation or operation of the mast.

In the new year we plan to hold community engagement sessions, establish a Community Sponsorship Fund, and refer the project to environmental regulators. More information on these activities will be provided in upcoming newsletters.
